Project description:

The project aims at taking a step forward in the growing field of development, verification and validation and certification of critical systems.

The project focuses on the more difficult/important points of (safety, efficiency, business, ...) of critical system development, verification and validation and certification process.

Project Objectives:

- To study both the scientific and industrial state of the art methodologies for system development.
- To study and develop strategies and techniques supported by automatic or semi-automatic tools and methods for the V&V process of critical systems.
- To study the interaction between security and safety in the context of complex networked service oriented systems.
- To promote the training and qualification of specialists.
